Vortex Consulting

Delivering Digital Transformation Excellence through Decades of Expertise and AI

2030 is the looming deadline for companies running on SAP, as it marks the end of extended support for SAP ECC systems. By then, every enterprise must be operating in SAP's ERP cloud environment. For most companies, the challenge is not a lack of intent but a lack of clarity and expert resources to execute the move. Many SAP environments are highly customized, often spanning decades and multiple geographies, making any change complex and risky without proper execution. With this cloud migration deadline on the horizon, enterprises hesitate because they are unsure how to proceed without disrupting their core operations. Adding to the complexity is a shortage of internal SAP expertise, which makes critical decision-making and the management of large-scale transformations difficult. The risk of scope creep and misaligned execution only heightens this hesitation.

In this high-stakes environment, SAP clients need more than just a vendor. They need a trusted partner with proven experience who can navigate these challenges and deliver clarity and confidence throughout the transformation journey. That is the role Vortex Consulting has come to play.

Rather than being a generalist that chases every flavor of technology, Vortex Consulting has positioned itself as a specialized ERP consultancy with a laser focus on SAP, alongside expertise in Oracle and Dynamics 365. For nearly three decades, the company has supported enterprise clients with environments too complex for surface-level solutions. With a team of senior consultants who have spent their careers inside SAP systems, it guides companies through the choices that define their digital future and supports execution with expert resource staffing.

"When ERP clients come to Vortex, they are not looking for jargon or abstract theories. They want guidance from seasoned professionals with decades of experience working within SAP systems—experts who can deliver clarity and actionable direction from day one. It is on this foundation that we have established enduring trust with our valued clients. With nearly 30 years in the SAP and ERP consulting space, Vortex Consulting has built a strong reputation as a high-quality, trusted advisor to clients across industries. We've guided companies through countless SAP implementations, upgrades, and transformations with a consistent focus on

delivering meaningful business outcomes. Our approach is fundamentally different from many of our competitors. Our Eagle AI project management platform sets Vortex apart by providing clients with a real-time, centralized single source of truth. It empowers timely decision-making, strengthens risk management, and enhances oversight, status tracking, and productivity—ultimately ensuring smoother delivery and greater value realization for our clients. While others prioritize cost efficiency by outsourcing work or relying on junior staff, Vortex Consulting takes a different path—one rooted in senior expertise, trust, long-term relationships, and AI technology," says Matt Wendroff, CPA, president and founding partner.

The biggest challenge in SAP digital transformation projects is not the technology. It is the invisible web of interdependencies, decades of customizations, legacy integrations, and shifting priorities that make every move feel high-stakes. Vortex Consulting addresses this directly by giving clients two things they rarely have at the start of transformation: predictability and visibility.

Vortex's S/4HANA OnRamp Methodology provides a guided assessment that maps out the entire project landscape before the project even begins. This upfront clarity helps clients set realistic timelines, budgets, and resource plans, significantly reducing the risk of scope creep and mid-project conflicts.

Once the project is underway, the Vortex AI Project Management Platform—Eagle AI—offers an intelligent dashboard where PMOs, steering committees, and project teams work from the same real-time data via a centralized

single source of truth. This shared visibility and single-pane-of-glass view keep complexity manageable and empower teams to make coordinated decisions that keep the transformation on track. Paired with OnRamp's upfront project scope clarity, the AI platform reduces complexity and keeps projects running smoothly.

Further setting Vortex apart is its deep SAP expertise combined with U.S.-based consultants who can step into projects immediately and integrate seamlessly with client teams, providing quick responses and insights that offshored providers cannot match.

> When ERP clients come to Vortex, they are not looking for jargon or abstract theories. They want guidance from seasoned professionals with decades of experience working within SAP systems—experts who can deliver clarity and actionable direction from day one. It is on this foundation that we have established enduring trust with our valued clients.

"Vortex clients value that our senior consultants bring decades of SAP expertise and step in from day one to make a difference. Vortex delivers a strong blend of talented IT

professionals and running smoothly. technology to provide the best functional SAP support in the industry. With nearly 30 years of proven experience, Vortex has built a reputation not just for delivering high-quality SAP ERP and IT consulting services, but for being a calm voice and trusted advisor during times of change and complexity. One of the clearest indicators of our value is the loyalty of our clients. At Vortex, we don't just contribute to successful projects—we build lasting relationships. Many of our clients come back to us again and again, not just within the same organization, but as they move to new companies and take on new roles. This pattern of repeat business and referrals is a direct result of the trust we've earned, the consistency we deliver, and the personal, high-touch service our clients count on. We view every engagement as a long-term partnership—not a transaction—and that philosophy has fueled our growth for the past three decades," says Scott Young, executive vice president.

Together, these methodologies, AI tools, and senior-level expertise transform a daunting transformation into a clear, controlled process, giving ERP clients confidence at every step.

The company's capabilities are well-established in client testimonials. For instance, Altenloh, Brinck & Co., a global company specializing in high-quality construction solutions, explained how Vortex's senior consultants worked seamlessly with their internal team to simplify its complex SAP ECC environment, laying the groundwork for future SAP innovation with SAP S/4HANA and Clean Core.

Vortex plans to expand its SAP relationship, adding more ERP public cloud capabilities and continuing the development of its Eagle AI project management platform. For companies struggling with digital transformation, Vortex Consulting cuts through complexity with proven expertise and provides steady guidance every step of the way. CR
